

Telecommunications Devices for the Deaf (TDD) In an effort to make County services accessible to all County residents, TDDs are located in all County buildings that have four or more phones. The devices are simple to operate and will enable persons who have access to a telecommunication device to communicate with our telecommunication devices to learn about and use County services. Individuals communicate by typing on the machine. Our machines are also capable of printing the message on paper in order to record the conversation:
