Weather Alerting on Your Smart Phone (some charges may apply or fees for downloading the app)

- Wireless Emergency Alerts (WEA) are free wireless notifications that are delivered to your mobile device as part of a federal public safety system by authorized cell phone services. They are designed to inform you of imminent threats to safety or missing person alerts in your area. In order to receive WEAs, you must have a capable device and be located in an area (e.g., county) targeted by authorized senders to receive the alert. Some cell phone networks in Catawba County are issuing these and the messages may include tornado warnings.
